

Designer:

Sound Design Challenge

I am designing...

It is for...

I will need to think about... *(the materials I will need, how I will fix it together, if it does the job, if the customer will like it, if it is safe)*

I will need...

Draw the diagrams of some different designs. Remember to include labels which describe the materials and to explain how you will join different parts together. Try to come up with 3 different designs.

When you are finished, share your ideas with your group and discuss what you like about each design. Then give some feedback about some improvements you think the designs could have, and some potential problems they might face with their designs. Choose your best design and make some improvements to it after your feedback.

I think Design Number _____ is my best design because _____

Evaluation of my design experience

I really enjoyed ...

I learnt ...

I was most pleased with ...

because ...

If I did it again, I would change ...

because
