## 1. What is Software?

- Software is a set of \_\_\_\_\_ that tells the computer what to do. Without software, the computer's \_\_\_\_\_ would be inactive.

## 2. Types of Software:

- **System Software:**
  - System software helps to manage the computer's \_\_\_\_\_ and other \_\_\_\_\_ on the computer.
  - Examples of system software include \_\_\_\_\_, macOS, \_\_\_\_\_, and utility programs like \_\_\_\_\_ programs.
- **Application Software:**
  - Application software helps users perform specific \_\_\_\_\_.
  - Examples of application software include \_\_\_\_\_ Word for writing documents, Google \_\_\_\_\_ for browsing the internet, and Adobe \_\_\_\_\_ for editing images.
