

Science - Year 4

Living Things & their Habitats – Block 4LvH2

Help Our Habitats!

Session 2

Resource Pack

Focus: I can consider many natural changes to an environment.

Design a living thing (plant or animal), that could survive all of the natural changes that may happen to an environment, for example tides or seasons. Label the parts that will help them to survive, for example pockets to store food when their food source is scarce. It can be based on a living thing that you already know, but with the added extras needed to survive many possible changes.

Homework

Research the phrase 'Climate Change'. What does it mean? Who or what will it affect? Ask a grown-up at home, read some information books, search on the Internet to find out.
